

AgniNetra | Incident review

SIH26162 PROTOTYPE - analyst verification required
Generated 2026-09-11 03:49 UTC

1. Observed thermal detection

Event / source	firms_N_20260904_2106_6a99ba40684c / NASA_FIRMS_PUBLIC_SNAPSHOT
Latitude / longitude	22.33719 / 69.86794
Acquisition (UTC)	2026-09-04 21:06:00
Satellite / instrument	N / Unavailable
FRP / brightness I4	3.19 MW / 308.40 K
FIRMS confidence (source / encoding)	nominal
Scan / track	0.40 km / 0.37 km

2. Classification and model

Assigned class	Unclassified
Stage 1 / model identifier	Unavailable / Unavailable
Model confidence	Unavailable
Analyst review	No review recorded

3. Geospatial and satellite evidence

Nearest mapped facility	Unavailable
Facility distance	Unavailable
Polygon containment	Not established
Sentinel-2 NDVI / NBR	Unavailable / Unavailable
Cloud fraction / land-cover code	Unavailable / Unavailable

4. Review priority

Heuristic triage score	Unavailable
Suggested action	Review the available evidence and data gaps.

This student prototype is not an official incident confirmation or emergency dispatch. A thermal anomaly does not establish an accidental industrial fire, gas leak or explosion. Missing values indicate unavailable evidence. Model scores require independent validation; the triage score is an unvalidated heuristic. NASA FIRMS and OpenStreetMap are source data providers.
